

## Non-Metallic Floor Hardener

Home Care Non-Metallic Floor Hardener provides a dense non-porous surface which is extremely hard wearing and abrasion resistant. The hardener is factory blended and is ready to use at the site.

It is a ready to use non-metallic surface and floor hardener, which is based on mixture of hard and natural aggregates. It is basically a combination of port land cement and special additives to improve workability.

As the floor hardener designed is non-metallic, so it is anti-skid, wear resistant and dust free, does not rust and do not disintegrate from the floor. It can be applied for wet rooms as well as out door applications.

# Benefits

- Suitable for repairs of old floors and toppings for new floor
- Production assembly storage halls and warehouses
- Hard toppings for any indoor or out door floor installations
- Facilitates easy cleaning
- It resists petrol, mineral oils etc
- Non-rusting and thus trouble free
- Increased strength and impact resistant
- Good wear and abrasion resistant toping which are non-dusting
- Non-slip and anti skid even in areas where oil is spilled
- Monolithic bond with the base concrete

# Usage

The time of application is very important in case of application of the non-metallic floor hardeners. If it is applied too early then it may absorb water and sink. If application is delayed, no moisture from the concrete surface will be available from the concrete to hydrate. Therefore, it should be applied 1-3 hours.
